

DineFlow

Every screen photographed and explained, the flows drawn out, and the installation from start to finish.

Who this is for

Everyone who uses DineFlow — owners, cashiers, cooks, front desk, housekeeping

The screens

Photographed from the running application with real data, not drawn

1 • Installing it

Send anyone this address and the page works out what they are holding. Installed, DineFlow opens without a browser around it, keeps its own icon, and updates itself whenever we publish.

1 A packaged installer, only if your browser cannot install

The one address to hand out

`https://your-address/get`

ON THIS DEVICE

Windows or Mac

Chrome or Edge

Android

Chrome

WHAT TO DO

One click. Press Install. Nothing downloads and nothing warns you

One tap. It lands beside the other apps

ON THIS DEVICE

WHAT TO DO

iPhone or iPad

Safari only

Share → **Add to Home Screen** → Add. Three taps; Apple allows no fewer

A link from WhatsApp

That window cannot install anything. The page says so and gives you the address to paste into a real browser

There is a QR code on the page. Point a phone at a desktop screen instead of typing the address.

2 · Signing in

Everyone has their own login. What you see afterwards depends on your role, so a waiter is not looking at the takings and a cook is not looking at guest addresses.

1 Your own password. Never share a login

One login per person, never shared. Every action is recorded against whoever was signed in — who voided a bill, who comped a room. A shared login makes that impossible to answer.

If you were given a temporary password, DineFlow asks you to set your own the first time you sign in.

3 · How every screen is arranged

Every screen shares the same shape, so learning one teaches you the rest. The menu on the left lists only the sections your role may open; the bar along the top searches everything — tables, rooms, guests, dishes.

- 1 How full the property is right now
- 2 Kitchen tickets past your target
- 3 Pantry items below their reorder level

The Control room itself

This is the opening screen: how today is going, at a glance. Each tile is a door — press Occupancy to reach Rooms, Running late to reach the kitchen. Underneath are the tables with orders on them and the guests in house tonight.

The numbers move on their own. No screen needs refreshing. When the kitchen marks a ticket ready, every screen that cares already knows.

4 · How an order flows

From the till to a paid bill. Every step happens on a screen in this manual, and each one hands the next its work automatically — nobody re-types anything.

A room-service order takes the same path, but ends on the guest's folio instead of a bill.

What the kitchen colours mean

COLOUR	MEANING
Plain	Within time
Amber	Past the hurry-up mark you set in Settings
Red	Past your target, and counted against speed of service

5 · How a stay flows

From a booking to a settled business date.

With inspections switched off, the second step is skipped and a cleaned room is sellable at once.

6 · What happens with no internet

You keep working. Orders, bills and status changes are held on the device and sent the moment the line returns, in the order they were taken. A small bar at the bottom of the screen shows what is waiting.

Nothing leaves the outbox except by succeeding, or by a person choosing to discard it.

Nothing you have taken is ever thrown away. If a write cannot be sent even after several attempts, it is kept and shown as **waiting on you** — what it was, when it was taken, and what the server said. You decide whether to send it again or discard it. DineFlow never discards a guest's order on its own.

The one exception is a write the server had already accepted — a repeat of something that did land. Keeping it would show you a failure that never happened, so it is dropped quietly.

7 • Control room

Today at a glance. Covered in section 3 — every tile opens the section behind it.

- 1 How full the property is right now
- 2 Kitchen tickets past your target
- 3 Pantry items below their reorder level

Shown again here so the section order matches the menu.

8 • Orders

Every table on your floor, and what is open on it. A table with an order shows the order number, how long it has been running and what it has come to so far.

- 1 Start a new order
- 2 Hold a table without an order on it

Press a free table to start an order on it, or **Reserve** to hold it for someone arriving. Press a busy table to add to the order already there rather than starting a second one.

9 • Taking an order

The till. Dishes on the left grouped the way your menu is grouped, the order building on the right.

- 1 Dish groups — tap one to filter
- 2 Everything on the menu
- 1 Pick the table, or choose takeaway, delivery or a room.
- 2 Tap dishes. Tap again for a second portion.
- 3 Add a note to a line if the guest asks for something — *no chilli*, *extra spicy*.
- 4 Press **Send to kitchen**.

It warns, it does not block. If the pantry cannot cover a dish, the screen says so — and still lets you sell it, because you may know something the pantry count does not.

10 · The kitchen screen

Three columns — New, On the fire, Ready to serve — and a ticket moves left to right. This one is shown during a busy service so every state is visible at once.

1 The screen customers read

Reading a ticket

- The number in the corner is how long it has been on the board.
- A coloured strip down the left edge says how urgent it is.
- **From the pantry** lists what starting it will draw, with anything short in red.
- A promised order shows its deadline counting down.

Stations

If you have named stations — Tandoor, Grill, Curry, Bar — the tabs across the top let each screen show only its own work. A ticket only reaches **Ready** when every station has finished its part.

All day

The strip under the tabs adds up every portion still to cook, so the grill batches seven of the same dish into one pan instead of five.

Keys 1–9 bump the tickets in order, R recalls the last one picked up. A bump bar is just a keyboard, so it works with nothing to set up. Anything bumped in the last half hour is listed under Ready to serve with a Recall button beside it.

11 · The order board

Put a spare screen where customers can see it. Order numbers being prepared on the left, ready to collect on the right, in letters readable across a room.

1 Being cooked now

2 Collect these

It never shows a room number. A room number on a public screen tells a stranger where a guest is sleeping, so room service appears simply as *Room service*, and takeaway shows a first name only.

12 • Billing

Every open order waiting to be paid. Press one to price it, take payment and print.

1 Locks the takings for this shift

The bill is already worked out: the dishes, any discount, service charge if you use one, and the tax split into CGST and SGST. You do not calculate anything.

No GSTIN means no tax on the bill. That is correct for a business that is not registered — collecting tax without a registration is not allowed. Enter your GSTIN in Settings and tax appears on the next bill.

Close shift locks the takings for the shift so they can be counted against the drawer.

13 · Menu and recipes

Everything you sell, grouped the way the till shows it. A dish carries its price, whether it is vegetarian, how long it takes, and optionally a recipe.

- 1 A group. Point it at a kitchen station
- 2 Every dish

Why a recipe is worth the trouble

Give a dish a recipe once and every plate sold takes its ingredients off the shelf automatically. Without one the dish still sells — the pantry simply does not move for it, and the kitchen ticket says so plainly.

Stations

Open **Categories** and point each group at a kitchen station. That is what lets the tandoor screen show only tandoor work.

14 • The pantry

What is on the shelf, what it cost, and what is running out. Stock falls as dishes sell and rises when you record a purchase.

Coriander bunch vegetable	186 pcs	6 pcs	₹8.91

- 1 Add stock you have bought
- 2 Where stock is going missing
- 3 Below this, it shows as low

- **Record purchase** — add stock you have bought, with what you paid.
- **Reorder at** — below this, the item shows as low on the Control room.
- **Leak finder** — where stock is disappearing faster than sales explain.

15 · Front desk

Reception. Who is arriving, who is leaving, who is in house — and the state of every room before you promise it to anybody.

- 1 Take a booking
- 2 Close the business date
- 3 Give the guest their room

A dot on the room number is housekeeping's word on that room. A star marks a VIP, with their preferences printed underneath so the desk does not have to remember.

If a room is not ready, the arrival says so — *Room not cleaned yet* or *Room awaits inspection* — before you hand over a key.

16 · Rooms and rates

Every room, by floor, colour-coded by what it is doing. The nightly rate lives on the room type, so changing a rate changes every room of that type.

1 The nightly rate lives on the type, not the room

The small dot beside a room number is housekeeping's condition — dirty, clean, inspected or pickup — separate from whether the room is sold.

17 · Housekeeping

The floor as housekeeping sees it, and the day's work. A room has two separate states, and keeping them apart is what stops a dirty room being sold.

- 1 The whole day's work in one press
- 2 A supervisor signs the room off
- 3 Send it back for cleaning

CONDITION	MEANING
Dirty	Needs cleaning
Clean	Cleaned, not yet checked
Inspected	A supervisor has passed it — ready for a guest
Pickup	Needs only a touch-up

Build today's sheet creates the whole day's work in one press: a service for every room with a guest staying tonight, and a clean for any dirty room nobody has raised a ticket for. Pressing it twice is safe.

Discrepancies lists every room the two sides of the house disagree about — shown occupied with nobody checked in, on sale but dirty, or a guest who was due out yesterday. On a good day it is empty.

18 • Night audit

Closing the business date. It posts no charges — the folio already prices every night — it settles what is outstanding and records how the day went.

Front desk • close of day

Night audit

Settle the business date before it rolls over.

← Front desk

09-21 Tuesday, 22 September

Occupancy 0% 0 of 15 sellable • 1 out of order	ADR ₹0.00 average rate per night sold	RevPAR ₹0.00 revenue per sellable room	Room revenue ₹0.00 1 in house right now
---	--	---	--

Arrivals Everyone expected has arrived. 0/0	Departures Still in a room they should have left: 0/0 101 Arjun Prakash #23	Housekeeping Dirty rooms 0 Out of order 1 Rooms in total 16 Open housekeeping →
--	---	--

2 Discrepancies
101 Arjun Prakash was due out before this date and is still in 1

1 Close the day
Anything still listed above goes into the record as it stands – settle what you can first.

- Mark the 0 arrivals that never came as no-shows
Their rooms go back on sale. A guest who turns up later gets a fresh booking.

Notes for the record

- 1 Settles the date and records it
- 2 Where the desk and housekeeping disagree
 - Who was expected and never arrived. Closing marks them no-show so their rooms go back on sale.
 - Who is still in a room they should have left.
 - Occupancy, ADR and RevPAR for the night.
 - Every disagreement between the front desk and housekeeping.

Closing the same day twice is safe: it replaces the record rather than adding a second one.

19 • Reports

How the business is actually doing, over a day, a week, a month or a quarter.

- 1 How long tickets take against your target
- 2 The takings, day by day

Sales by day and top dishes; ingredient cost and wastage against takings; speed of service by hour against your own target; and for a hotel, occupancy, ADR and RevPAR with every closed night audit beneath.

Speed of service ignores abandoned tickets. One ticket left open for hours and closed later would make the average meaningless, so anything past four hours is counted separately and named.

20 • Tax and GST

What you owe and when it is due, worked out from the bills you have already raised.

1What is due, and when

2Every filing date for the year

The overview shows the period's position; Returns lists what is due; the Calendar carries every filing date for the year; Documents holds what you have filed.

21 · Staff and access

Everyone who can sign in, and exactly what each of them may open.

- 1 Create a login for somebody
- 2 Let them set their own password

Add a person, choose their role, and tick the sections they need. **Invite with a code** lets them set their own password rather than you choosing one for them.

Turn a login off rather than deleting it. The record of what that person did stays attached to their name.

22 · Settings

The decisions that are yours, not ours.

- 1 UPI and card settings
- 2 Name the tables on your floor

SETTING	WHAT IT CHANGES
GSTIN and tax rates	Whether tax appears at all, and at what rate
Kitchen stations	Which screen sees which dishes
Hurry / late minutes	When a kitchen ticket turns amber, then red
Room inspections	Whether a supervisor must pass a room before it is sold
On-time promise	Whether it is offered, the minutes, and the percentage charged
Service charge	The percentage added before tax
Tables	The names and zones of the tables on your floor

23 · If something looks wrong

WHAT YOU SEE	WHAT TO DO
A screen looks out of date	Pull down to refresh. Screens also refresh themselves
“Working offline” will not clear	Check the Wi-Fi. It retries on its own and tells you when it is back
Something says “waiting on you”	Open it, read the reason, press Send again
No tax on a bill	The GSTIN is empty in Settings. Deliberate, not a fault
Check-in refused	Inspections are on and the room has not been passed by a supervisor
A dish is missing at the till	It is switched off on the Menu page
The kitchen screen is empty	Nothing is cooking, or the screen is filtered to a station with no work
Install button does nothing	The page is open inside WhatsApp or similar. Open it in Chrome or Safari
Signed out unexpectedly	Sign in again. Nothing is lost
