

DineFlow

Running your restaurant or hotel, day to day.

Everything you and your staff need, in the order you will need it.

Who this is for

Owners, managers, cashiers, cooks, front desk and housekeeping

You need no training

Every screen is built to be used on a busy evening, not studied

1 • What DineFlow does

DineFlow is one place to run a property. An order taken at the till appears on the kitchen screen; when the kitchen marks it ready the floor knows; the bill carries the right tax without anyone working it out; the pantry goes down as the food is cooked. If you also let rooms, the same app holds the front desk, housekeeping and the night audit.

It keeps working when the internet does not, and it keeps every property's information entirely separate from every other property's.

26

sections, switched on to suit the property

One

screen for the kitchen, the till and the desk

Offline

orders keep being taken with no line

2 • Putting it on your devices

Send anyone this address — a manager, a new waiter, a cook using their own phone:

```
https://your-address/get
```

The page works out what they are holding and shows them the one thing to do.

ON THIS

WHAT HAPPENS

Windows or Mac, in Chrome or Edge

One click. Nothing downloads, nothing warns you

Android, in Chrome

One tap. It lands beside the other apps

ON THIS

WHAT HAPPENS

iPhone or iPad, in Safari

Share → **Add to Home Screen** → Add. Three taps; Apple allows no fewer

A link opened inside WhatsApp

The page says so and gives you the address to paste into a real browser

Installed, it stops looking like a website. No address bar, its own icon, its own window on a till. It updates itself whenever we publish — nobody has to reinstall anything.

There is a QR code on that page, so a phone can be pointed at a desktop screen instead of typing.

3 · Who signs in, and what they can see

Everyone gets their own login. What each person sees is decided by their role, so a waiter is not looking at your takings and a cook is not looking at guest addresses.

ROLE	TYPICALLY SEES
Owner	Everything, including reports, tax and settings
Manager	Almost everything; the day-to-day running of the property
Cashier	Orders and billing
Waiter	Taking orders, tables
Chef	The kitchen screen and the pantry
Front desk	Arrivals, departures, folios, the night audit
Housekeeping	Room conditions and the task sheet

Add people under **Staff**. You can switch any section on or off per person.

One login per person. Sharing a login means you cannot tell who voided a bill or who comped a room. Every action is recorded against whoever was signed in.

4 · An evening in the restaurant

- 1 **Take the order.** *Orders* → *New*. Pick the table, tap the dishes. The screen warns you if the pantry is short of something, and if the table already has an open order it offers to add to it.
- 2 **Send it.** The kitchen sees it immediately. A ticket also prints if you have a kitchen printer.
- 3 **The kitchen cooks it.** See the next section.
- 4 **Serve it.** When the kitchen marks a ticket ready, it turns green on the floor.
- 5 **Bill it.** *Billing* → the table → the bill is already priced, with tax worked out.

Room service works the same way: take the order against the room, and it goes onto that guest's folio instead of a separate bill.

5 · The kitchen screen

Three columns: **New**, **On the fire**, **Ready to serve**. A ticket moves left to right.

What the colours mean

COLOUR	MEANING
Plain	Within time
Amber	Past the hurry-up mark you set
Red	Past the target, and counted against your speed of service

Both times are yours to set, in *Settings* → *Kitchen control*. They are not fixed by us.

Stations

If you name stations — Tandoor, Grill, Curry, Bar — each screen can show only its own work. The tandoor cook stops reading past drinks orders. A ticket only moves to ready when every station has finished its part. Set which station makes what on the *Menu* page.

All day

The strip across the top adds up every portion still to cook. Seven butter chickens across five tickets go into one pan, not five.

If a ticket is bumped by mistake

Anything picked up in the last half hour is listed under **Ready to serve**. Press **Recall**, or the **R** key, and it comes back.

Keys 1–9 bump the tickets in order. A bump bar plugged into the screen is just a keyboard, so it works with no setting up.

The board customers can see

Put a spare screen on the wall and open *Order board*: order numbers being prepared on the left, ready to collect on the right. It never shows a room number.

6 · The bill, and the tax on it

DineFlow works the tax out. You do not calculate anything by hand.

- **Food** is taxed at the rate you set, split into **CGST** and **SGST** on the printed bill.
- **Rooms** are taxed per night, on what that night was actually sold for — so a ₹4,000 room and a ₹9,000 suite on the same invoice carry different rates, which is what the law asks for.
- **Extras** — spa, laundry, transport — carry their own rate.

If you have not entered a GSTIN, no tax is added to any bill. That is correct for a business that is not registered: collecting tax without a registration is not allowed. If you are registered, put the GSTIN in *Settings* and tax appears on the next bill.

A discount is taken off before tax. Service charge, if you use one, is separate from tax and is not a government levy.

7 · The on-time promise

Optional, and off unless you turn it on. You offer the guest a deadline — *on your table in 30 minutes, or the food is free* — and charge a small percentage for it.

- 1 Switch it on in *Settings*, set the minutes and the percentage.
- 2 At the till, the cart shows a toggle. Use it only when the guest agrees.
- 3 The kitchen ticket shows the deadline counting down.
- 4 If it is missed, the bill comes to zero — including the fee you charged for the promise.

The cashier can override the verdict on the bill screen if the delay was the guest's own doing.

8 · A stay, from arrival to departure

- 1 **Book.** *Front desk* → *New booking*. Dates, room, guest, any advance taken.
- 2 **Check in.** The arrival is on the front desk list. A dot on the room number tells you whether housekeeping has it ready; a star marks a VIP, with their preferences underneath.
- 3 **During the stay.** Restaurant orders, spa, laundry all post to the folio.
- 4 **Check out.** Take payment; the invoice is produced and the room goes to housekeeping automatically.

If you have inspections switched on, check-in is refused until a supervisor has passed the room — the app will say so plainly rather than letting a guest walk into an unready room.

9 · Housekeeping

A room has two separate states, and keeping them apart is what stops a dirty room being sold.

HOUSEKEEPING SAYS	MEANING
Dirty	Needs cleaning

HOUSEKEEPING SAYS	MEANING
Clean	Cleaned, not yet checked
Inspected	A supervisor has passed it — ready for a guest
Pickup	Needs only a touch-up

Build today's sheet creates the day's work in one press: a service for every room with a guest staying tonight, and a clean for any dirty room nobody has raised a ticket for. Pressing it twice is safe.

The **discrepancies** panel lists every room the two sides of the house disagree about — shown occupied with nobody checked in, on sale but dirty, or a guest who was due out yesterday. On a good day it is empty.

10 · Closing the day

Front desk → *Night audit* settles the business date. It posts no charges — the folio already prices every night — it settles what is outstanding and records the day.

- Who was expected and never arrived, and marks them no-show so their rooms go back on sale
- Who is still in a room they should have left
- Occupancy, ADR and RevPAR for the night
- Every disagreement between the front desk and housekeeping

Closing the same day twice is safe: it replaces the record rather than adding a second one.

For a restaurant, the equivalent is *Close day* on the Billing page, which locks the day's takings by payment type.

11 · The pantry

Give a dish a recipe once, and every plate sold takes its ingredients off the shelf automatically.

- **Pantry** shows what is left and what has fallen below its reorder level.
- The till warns before sending an order it cannot cover. It warns; it never blocks the sale.
- A dish with no recipe still sells — the pantry simply does not move for it, and the kitchen ticket says so.

12 · Knowing how the business is doing

WHERE	WHAT IT ANSWERS
Control room	How today is going, right now
Reports	Sales, top dishes, ingredient cost, wastage, speed of service, occupancy and ADR
Tomorrow	What to prepare for, before you lock up tonight
Tax & GST	What you owe, and the filing periods

Speed of service ignores tickets left open for hours and closed later — one forgotten ticket would otherwise make the average meaningless. The count of ignored tickets is shown.

13 · Settings that are yours to decide

SETTING	WHAT IT CHANGES
GSTIN and tax rates	Whether tax appears at all, and at what rate
Kitchen stations	Which screen sees which dishes
Hurry / late minutes	When a kitchen ticket turns amber, then red
Room inspections	Whether a supervisor must pass a room before it is sold
On-time promise	Whether it is offered, the minutes, and the percentage

SETTING	WHAT IT CHANGES
Service charge	The percentage added before tax

14 · When the internet drops

Keep working. Orders, bills and status changes are held on the device and sent the moment the line returns. A small bar at the bottom of the screen shows what is waiting.

Nothing you have taken is ever thrown away. If a write cannot be sent even after several attempts, it is kept and shown as **waiting on you**, with what it was and when it was taken. You decide whether to send it again or discard it — the app never discards a guest's order on its own.

15 · If something looks wrong

WHAT YOU SEE	WHAT TO DO
A screen looks out of date	Pull down to refresh. Screens also refresh themselves
"Working offline" will not clear	Check the Wi-Fi. The app retries on its own
Something is "waiting on you"	Open it, read the reason, press Send again
No tax on a bill	The GSTIN is empty in Settings — deliberate, not a fault
Check-in refused	Inspections are on and the room has not been passed
A dish is missing at the till	It is marked unavailable on the Menu page
Signed out unexpectedly	Sign in again. Nothing is lost
